Ada Lovelace

The World's First Computer Programmer

An 1835 portrait painting of Ada Lovelace, who envisioned the immense computational potential of analytical engines.

Timeline of an Extraordinary Mind:

- **1815** - Born in London to the famous poet Lord Byron and Lady Byron.
- **1833** - Meets mathematician Charles Babbage through their mutual friend Mary Somerville, sparking a lifelong collaboration.
- **1842** - Translates Italian mathematician Luigi Menabrea's memoir on Babbage's proposed mechanical general-purpose computer, the Analytical Engine.
- **1843** - Publishes her extensive set of notes on the engine. "Note G" contains an algorithm to compute Bernoulli numbers, now recognized as the world's first complete computer program.
- **1852** - Passes away at the young age of 36, leaving behind a legacy that wouldn't be fully appreciated until the birth of modern computing a century later.

"The Analytical Engine weaves algebraic patterns just as the Jacquard loom weaves flowers and leaves."

— Ada Lovelace
